

Customer Story

IPng Networks AS8298

Pim van Pelt <pim@ipng.ch> • 2022-06-10 • Baur au Lac, Zurich

Introduction

Pim van Pelt

Pim van Pelt (PBVP1-RIPE)

- Member of the RIPE community since 1999 (RIPE #34)
 - Has used pim@ipng.nl for 22 years
 - And also pim@ipng.ch for 15 years
 - Incorporated ipng.ch in Switzerland in 2021

Introduction

IPv6 Deployment & Tunnel Broker

[Enter the SixXS website](#)

SixXS - a global IPv6 Tunnelbroker

- Member of the RIPE community since 1999 (RIPE #34)
 - Founded SixXS w/ Jeroen Massar [[ref](#)]
 - Operated SixXS from ca. 1999 - 2017 [[sunset](#)]
 - Used **AS8298** for Ghost Route Hunter (2003) [[RIPE #44](#)]
-

Introduction

IPng Networks GmbH

- Developer of Software Routers - VPP and DPDK [[ref](#)]
- Tiny operator from Brüttisellen (ZH), Switzerland [[ref](#)]
- Twelve VPP/Bird2 routers [[ref](#)] (UN/LOCODE names)
- European ring: *peering on the FLAP** [[ref](#)] ~1850 adjacencies
- Acquired AS8298 from SixXS [[ref](#)]

Vector Packet Processing

VPP reads a **vector** of up to 256 packets from its interfaces:

1. Packets are prefetched (or directly written) into CPU **d-cache**
2. All packets go through a directed graph
 - a. First packet: graph node's code loaded into CPU **i-cache**
 - b. All additional packets: fully in d/i-cache: 7-20x faster
3. Packets then traverse *as a vector* into the next node(s)
 - a. Optimized with SIMD (SSE, AVX, AVX512, ...)
 - b. No context switches, good TLB hit rate due to hugepages
 - c. Lockless: multi-threading gives linear scaling
4. Hardware offload: use silicon if available
5. Plugins: rearrange the graph nodes and add functionality

Always hungry
for packets ...

Vector Packet Processing - example

```
pim@hippo:~$ vppctl
```

```
vpp# set interface state TenGigabitEthernet3/0/0 up
```

```
vpp# set interface mtu packet 9000 TenGigabitEthernet3/0/0
```

```
vpp# set interface ip address TenGigabitEthernet3/0/0 2001:db8:0:1::2/64
```

```
vpp# set interface ip address TenGigabitEthernet3/0/0 192.0.2.2/24
```

```
vpp# ip route add 2000::/3 via 2001:db8:0:1::1
```

```
vpp# ip route add 0.0.0.0/0 via 192.0.2.1
```

```
pim@hippo:~$ vppctl show interface TenGigabitEthernet3/0/0
```

TenGigabitEthernet3/0/0	up	9000/0/0/0	rx packets	5969930253
			rx bytes	2139798549228
			tx packets	14517083897
			tx bytes	6864831067486
			drops	945
			ip4	3862409855
			ip6	2107502378

VPP: Linux Controlplane

Wrote a VPP Plugin [[github](#)] that:

1. Creates tun/tap interface in Linux for a given VPP interface
 - a. VPP->Linux: Traffic to **ip4-local** and **ip6-local** is punted into TAP
 - b. Linux->VPP: packets into TAP are inserted into **virtio-input**
2. Syncs interface changes in VPP into Linux
3. Listens to **Netlink messages** and syncs Linux changes into VPP
4. Allows operators to use VPP almost exactly as if it were Linux
 - Configure interfaces, addresses, routes by hand, or ...
 - ...using common tools like `ip(1)`, FRR, or BIRD/BIRD2

⇒ VPP is Linux's *software equivalent* of an ASIC dataplane ⇐

VPP: Linux Controlplane - ip

```
pim@hippo:~$ vppctl lcp create TenGigabitEthernet3/0/0 host-if xe0

pim@hippo:~$ sudo ip link set xe0 up mtu 9000
pim@hippo:~$ sudo ip address add 2001:db8:0:1::2/64 dev xe0
pim@hippo:~$ sudo ip address add 192.0.2.2/24 dev xe0

pim@hippo:~$ sudo ip link add link xe0 name servers type vlan id 101
pim@hippo:~$ sudo ip link set servers mtu 1500 up
pim@hippo:~$ sudo ip addr add 2001:678:d78:3::86/64 dev servers
pim@hippo:~$ sudo ip addr add 194.1.163.86/27 dev servers
pim@hippo:~$ sudo ip route add default via 2001:678:d78:3::1
pim@hippo:~$ sudo ip route add default via 194.1.163.65

pim@hippo:~$ ping 8.8.8.8
PING 8.8.8.8 (8.8.8.8): 56 data bytes
64 bytes from 8.8.8.8: icmp_seq=0 ttl=121 time=1.348 ms
...
```

VPP: Linux Controlplane - Bird2

Converges full
BGP table in 7s

```
pim@defra0:~$ birdc show route count
```

```
BIRD 2.0.7 ready.
```

```
8018726 of 8018726 routes for 907513 networks in table master4
```

```
1467252 of 1467252 routes for 144687 networks in table master6
```

```
523590 of 523590 routes for 261795 networks in table t_roa4
```

```
105464 of 105464 routes for 52732 networks in table t_roa6
```

```
Total: 10115032 of 10115032 routes for 1366727 networks in 4 tables
```

```
pim@defra0:~$ birdc show ospf neighbor ospf6
```

```
BIRD 2.0.7 ready.
```

```
ospf6:
```

Router ID	Pri	State	DTime	Interface	Router IP
194.1.163.7	1	Full/PtP	30.715	xe1-3.100	fe80::6a05:caff:fe32:3e49
194.1.163.34	1	Full/PtP	35.056	xe1-2.200	fe80::6a05:caff:fe32:45ae
194.1.163.140	1	Full/DR	37.944	xe1-1.2006	fe80::5054:ff:feb0:442c

Deploying: Partnership with IP-Max

IP-Max:

- 30G DWDM Zurich-Frankfurt: three separate carriers/paths
- 10G DWDM Frankfurt-Amsterdam: NIKHEF
- 30G of LAG capacity towards DE-CIX
 - Reseller of all DE-CIX exchange points

IPng Networks:

- Te0/0/0/4 – EoMPLS to NTT/eShelter Rümlang (chrma0.ipng.ch)
- Te0/1/0/4 – EoMPLS to Interxion Glattbrugg (chgtg0.ipng.ch)
- Te0/2/0/4 – EoMPLS to NIKHEF Amsterdam (nlams0.ipng.ch)

DE-CIX Peering: 972 ASNs, 238K IPv4, 44K IPv6

- DE-CIX Frankfurt (970 ASNs, peer with **810**) ⇒ 156K IPv4 37K IPv6
 - DE-CIX Munich (176 ASNs present, peer with **154**) ⇒ 62K IPv4 3K IPv6
 - DE-CIX Dusseldorf (208 ASNs present, peer with **183**) ⇒ 19K IPv4 3K IPv6
 - DE-CIX Hamburg (170 ASNs present, peer with **152**) ⇒ 1450 IPv4 215 IPv6
-

IP-Max: Stable L2 backhaul to DE-CIX

```
pim@chrma0:~$ date
Thu Jun 9 23:08:50 CEST 2022
```

```
pim@chrma0:~$ birdc show bfd sessions
```

IP address	Interface	State	Since	Interval	Timeout
194.1.163.9	xe0-0	Up	2022-04-20 12:35:57	0.100	3.000

```
pim@chrma0:~$ ping defra0
```

```
PING defra0(defra0.ipng.ch (2001:678:d78::7)) 56 data bytes
```

```
...
```

```
--- defra0 ping statistics ---
```

```
5 packets transmitted, 5 received, 0% packet loss, time 4007ms
```

```
rtt min/avg/max/mdev = 5.702/5.744/5.786/0.026 ms
```

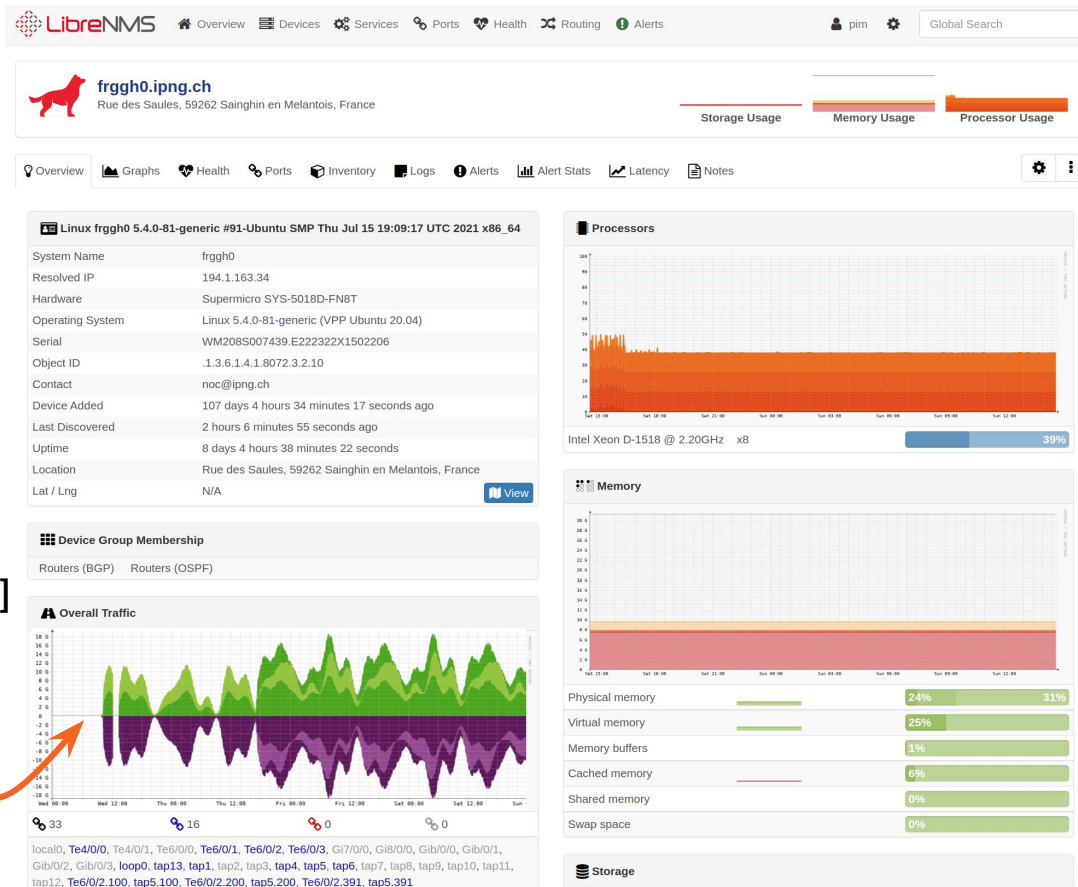

LibreNMS

VPP: SNMP and NMS

1. Wrote an SNMP Agent [[github](#)]
2. Added *logo* to LibreNMS [[ref](#)]
3. Added *distro* to LibreNMS Agent [[ref](#)]

Is forwarding
18Gbps
